0 Executive summary

The Spanish Association for Standardization (UNE), as a European Standardization Body, is a partner in the upPE-T project to provide support regarding the standardization tasks included in the project. In order to fulfil this commitment, this deliverable D7.11 *Standardization contribution* has been prepared to guide the partners about the published standards and standards under development that can be applicable to upPE-T.

This deliverable contains the fields of interest related to UpPE-T project, given by its consortium, and, from this starting point, the identification and analysis of the standardization technical committees (TCs) related to the project as well as the published standards and standards under development that can be useful and relevant for the project activities. Furthermore, it can help in the future to identify standardization gaps that can be covered by the results of the project.

1 Introduction and methodology

1.1 Short introduction to standardization

This chapter is a general introduction to standardization for partners not familiar with it and it is based on general information developed by the Standards Organizations. Therefore, it is also included in other similar deliverables produced by UNE in other Horizon 2020 projects.

Standards are voluntary technical documents that set out requirements for a specific item, material, component, system or service, or describes in detail a particular method, procedure or best practice. Standards are developed and defined through a process of sharing knowledge and building consensus among technical experts nominated by interested parties and other stakeholders, including businesses, consumers and environmental groups, among others. These experts are organized in Technical Committees (TCs), which are subdivided in Subcommittees (SCs) or Working Groups (WGs). These TCs are included in the structure of the Standardization Organizations (National, European and International, with the respective mirror committees) and work following their internal regulations.

The standardization bodies operate at National (UNE, AFNOR, BSI, DIN, etc.), Regional (CEN, CENELEC, ETSI) or International (ISO, IEC, ITU) level. Sometimes there are different standardization bodies at the same level but covering different fields. This is the case of ISO (general), IEC (electrical) and ITU (telecommunications) at International level, or CEN, CENELEC and ETSI at European level in the same way.

There are also different kinds of standardization documents. The most widespread is the standard, which has a different code depending on the organization under it was developed, e.g. EN for European Standards, ISO or IEC for International standards. Other types of documents are Technical Specifications (TS), Technical Reports (TR) and Workshop Agreements (CWA). Further Amendments to the standards are identified by adding A1, A2, etc. at the end of the standard code.

At European level, all the members of CEN and CENELEC shall adopt EN standards as national standards and have to withdraw any existing national standard which could conflict with them. A summary of the characteristics of the different standardization documents could be found in the following table 1.

Table 1: Characteristics of different standardization documents

Type	International code	European code	National code	Main characteristics
Standard	ISO IEC	EN	UNE, NF, BS, DIN, etc. When adopting: UNE-EN, NF-EN, UNE-ISO, NF-ISO, etc.	Elaboration: 3 years 2 steps of member approval European: compulsory national adoption Revision: every 5 years
Technical Specification	ISO/TS IEC/TS	CEN/TS CLC/TS	When adopting: UNE-CEN/TS, NF-CEN/TS, UNE-ISO/TS, NF-ISO/TS, etc.	Elaboration: 21 months 1 step of member approval or internal approval in TC European: optional national adoption Revision: at 3 years (upgrading to EN or deletion)
Technical Report	ISO/TR IEC/TR	CEN/TR CLC/TR	When adopting: UNE-CEN/TR, NF-CEN/TR, UNE-ISO/TR, NF-ISO/TR, etc.	Elaboration: free timeframe Internal approval in TC European: optional national adoption No revision required
Workshop Agreement	IWA	CWA	Variable	Elaboration: free timeframe (usually few months) Internal approval in the Workshop European: optional national adoption Revision: at 3 years (upgrading to EN or deletion)

There is also an agreement established between European and International Organizations (e.g. CEN and ISO) in order to avoid duplication of efforts and promote global relevance of standards, which allows to adopt or develop in parallel each other's standards with the same content and code. National standards could also be proposed as a base for new

European or International standards. The following figure 1 shows the tracks of the standards.

Figure 1 Possible tracks of standards adoption

Therefore, the code of any standard is the combination of the above-mentioned issues, and could be explained as shown in figure 2:

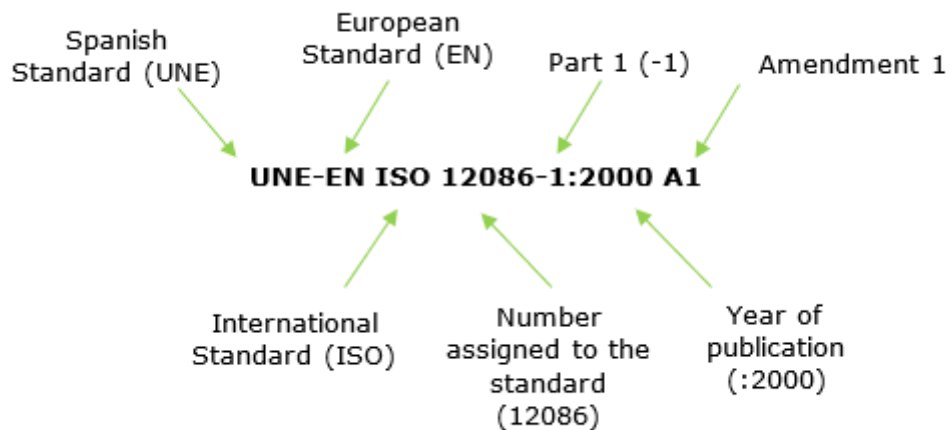

Figure 2 Example of identification of elements in the code of a standard

1.2 Methodology of the document

This document covers the standardization activity found relevant for the upPE-T project. In order to structure the research, a list of key concepts was elaborated by UNE to act as a starting point for the identification of standardization areas. This initial list was shared with upPE-T project partners, who were asked to provide their feedback.

The list was completed taking into consideration the comments and the suggestions received from partners, resulting in the following key concept collection.

- Plastics
- Polyethylene (PE)
- Polyethylene terephthalate (PET)
- Biopolyester (PHBV)
- Biopolymers
- Biodegradable plastics
- Thermoplastics
- Plastic properties
- Migration test methods
- Materials in contact with foodstuffs
- Plastic packaging
- Food & drink packaging
- Ecodesign
- Recycled plastics
- Plastic wastes
- Life Cycle Assessment
- I+D+I project management
- Innovation management
- Terephthalic acid
- Enzymes

The standardization analysis covers European standardization developed by the European Committee for Standardization (CEN), the European Committee for electrotechnical Standardization (CENELEC), the European Telecommunications Standards Institute (ETSI) and also the International standardization developed by the International Organization for Standardization (ISO), and the International Electrotechnical Commission (IEC).

To make it more structured and to facilitate understanding, this document is organized in standardization areas. The corresponding standardization technical committees (TCs) and

other technical bodies that are found relevant for the subjects have been identified as reference for the compilation of published standards and under development standards relevant for upPE-T project.

3 Standardization related to upPE-T project

3.1 Technical committees overview

The following is a list of the European and international committees which have been identified as technical bodies working on subjects related to upPE-T project.

Table 2: European and international committees related to upPE-T project

Subject (Key concepts)	Technical committee
PLASTIC MATERIALS AND PROPERTIES Plastics Polyethylene (PE) Polyethylene terephthalate (PET) Biopolyester (PHBV) Biopolymers Biodegradable plastics Recycled plastics Thermoplastics Plastic properties Migration test methods Terephthalic acid Enzymes	CEN/TC 249 Plastics
	CEN/TC 249/WG 11 Plastics recycling
	CEN/TC 249/WG 16 Welding of thermoplastics
	CEN/TC 249/WG 19 Light exposure
	CEN/TC 249/WG 7 Thermoplastic films for use in agriculture
	CEN/TC 249/WG 9 Bio-based and biodegradable plastics
	ISO/TC 61 Plastics
	ISO/TC 61/SC 1 Terminology
	ISO/TC 61/SC 2 Mechanical behaviour
	ISO/TC 61/SC 4 Burning behaviour
	ISO/TC 61/SC 5 Physical-chemical properties
	ISO/TC 61/SC 6 Ageing, chemical and environmental resistance
	ISO/TC 61/SC 9 Thermoplastic materials
	ISO/TC 61/SC 10 Cellular plastics
ISO/TC 61/SC 11 Products	
ISO/TC 61/WG 4 Plastics joining	
PACKAGING AND USE OF PLASTICS Materials in contact with foodstuffs Plastic packaging Food & drink packaging	CEN/TC 261 Packaging
	CEN/TC 261/WG 1 Management standards for packaging of foodstuffs
	CEN/TC 194 Utensils in contact with food
	CEN/TC 194/WG 1 Cookware

	CEN/TC 194/WG 8 Overall migration
	ISO/TC 122 Packaging
	ISO/TC 122/SC 3 Performance requirements and tests for means of packaging, packages and unit loads (as required by ISO/TC 122)
	ISO/TC 122/WG 5 Terminology and vocabulary
ENVIRONMENTAL MANAGEMENT AND LIFE CYCLE ASSESSMENT	CEN/TC 249/WG 24 Environmental aspects
Ecodesign	CEN/TC 261/SC 4 Packaging and Environment
Plastic wastes	CEN/TC 350 Sustainability of construction works
Life Cycle Assessment	CEN/SS S26 Environmental management
Packaging and environment	CEN/TC 411 Bio-based products
Sustainability of construction works	CEN/TC 411/WG 1 Terminology
	CEN/TC 411/WG 3 Bio-based content
	CEN/TC 411/WG 4 Sustainability criteria, life cycle analysis and related issues
	CEN/TC 411/WG 5 Certification and declaration tools
	ISO/TC 61/SC 14 Environmental aspects
	ISO/TC 122/SC 4 Packaging and the environment
	ISO/TC 59/SC 17 Sustainability in buildings and civil engineering works
	ISO/TC 207 Environmental management
	ISO/TC 207/SC 1 Environmental management systems
	ISO/TC 207/SC 2 Environmental auditing and related environmental investigations
	ISO/TC 207/SC 3 Environmental labelling
	ISO/TC 207/SC 4 Environmental performance evaluation
	ISO/TC 207/SC 5 Life cycle assessment
PROJECT MANAGEMENT	CEN/TC 389 Innovation management

I+D+I project management Innovation management	CEN/TC 389 Collaboration and Creativity Management
	CEN/TC 389/WG 2 Innovation Management System
	CEN/TC 389/WG 3 Innovation Self Assessment Tools
	CEN/TC 389/WG 4 Design Thinking
	CEN/TC 389/WG 5 Intellectual Property Management
	CEN/TC 389/WG 6 Strategic Intelligence Management
	ISO/TC 279 Innovation management
	ISO/TC 279/WG 1 Innovation management system
	ISO/TC 279/WG 2 Terminology, terms and definitions
	ISO/TC 279/WG 3 Tools and methods

Please note that, sometimes, under the structure of a technical body, some working groups and subcommittees may cover more than one of the subjects mentioned above. For example, concepts related to environment could be indicated in technical bodies regarding plastics or regarding packaging, for example. To make it clearer, we have considered that concepts once, classified under the most relevant body in each case.

3.2 List of standards related to upPE-T project

3.2.1 List of standards related to plastic materials and properties

These subjects involve a lot of concepts identified as “key concepts” for the upPE-T project, like “plastics”, “polyethylene (PE)”, “polyethylene terephthalate (PET)”, “biopolyester (PHBV)”, “biopolymers”, “biodegradable plastics”, “recycled plastics”, “thermoplastics”, “plastic properties”, “migration test methods”, “terephthalic acid” and “enzymes”.

There are a lot of standards closely related to plastic materials and properties. They are mostly elaborated by CEN/TC 249 *Plastics* and their working groups and, at an international level, ISO/TC 61 *Plastics*.

In terms of standardization, at a European level, [CEN/TC 249 Plastics](#) covers the standardization of terminology, test methods, specifications, classifications and

designation systems, environmental aspects, joining systems and techniques, of plastics, plastic-based materials, semi-finished products and products (thermoplastics, thermosets, degradable plastics, bio-based polymers, thermoplastic elastomers, composites, reinforcement products for plastics, recyclates). Rubber is excluded. Specific end-product related items are also excluded if they are covered by the scope of an existing product TC.

At an international level, [ISO/TC 61 Plastics](#) is responsible for the standardization of nomenclature, methods of test, and specifications applicable to materials and products in the field of plastics including processing (of products) by assembly in particular, but not limited to, polymeric adhesives, sealing, joining, welding. Rubbers and lacquers are excluded.

In this respect, a list of published standards and under development standards identified for upPE-T project are shown in table 3 and table 4:

Table 3: Published standards related to plastic materials and properties for upPE-T project

3.2.2 List of standards related to packaging and use of plastics

Standards regarding packaging and use of plastics, related to upPE-T project, have been developed by several technical committees in order to ensure that all project partners share a common understanding of requirements and constraints for the research and innovation actions of the project.

In this regard, [CEN/TC 261 Packaging](#) is responsible for the elaboration of standards dealing with terminology, dimensions, capacities, marking, test methods, performance requirements and environmental aspects in the field of packaging and unit loads. The field covers primary, secondary and transport packagings and unit loads, whatever the materials, shapes, contents or distribution system used.

In this regard, [CEN/TC 194 Utensils in contact with food](#) is responsible for the standardization in the field of kitchen, table and household utensils, used in the preparation, cooking, serving and consumption of food and beverage, domestically and in catering establishments. Standardization of conditions of storage and transportation of catering containers containing prepared foodstuffs.

At an international level, [ISO/TC 122 Packaging](#) is responsible for the standardization in the field of packaging with regard to terminology and definitions, characteristics, performance requirements and tests, and utilization of related technologies on packaging.

In this respect, a list of standards identified for upPE-T project is shown below. They are those specially linked to the following concepts:

- “Materials in contact with foodstuffs”
- “Plastic packaging”
- “Food & drink packaging”

Below in table 5, a list of published standards related to this subject and relevant to upPE-T project is shown.

Table 5: Published standards related to packaging and use of plastics for upPE-T project

3.2.3 List of standards related to environmental management and life cycle assessment

Environmental management and life cycle assessment are concepts that are closely linked to upPE-T project. They are specifically covered by technical committees at European and at international level.

In this regard, [CEN/TC 249/WG 24 Environmental aspects](#), [ISO/TC 61/SC 14 Environmental aspects](#), [CEN/TC 261/SC 4 Packaging and Environment](#) and [ISO/TC 122/SC 4 Packaging and the environment](#), as well as [CEN/TC 350 Sustainability of construction works](#) and [ISO/TC 59/SC 17 Sustainability in buildings and civil engineering works](#), also develop their standardization activity in close connection to environmental issues, in their specific field (plastics, packaging, construction works).

On the other hand, and in a more generic scope, [CEN/TC 411 Bio-based products](#) is responsible for:

- i. Development of standards for bio-based products covering horizontal aspects. This includes consistent terminology, sampling, certification tools, bio-based content, application of and correlation towards life cycle analysis, sustainability

- criteria for biomass used and for final products, and aspects where further harmonization is needed on horizontal level;
- ii. Development of standards for bio-solvents, covering product functionality, biodegradability and, if necessary, product specific aspects not covered under it.

At an international level, [ISO/TC 207 Environmental management](#) is responsible for the standardization in the field of environmental management to address environmental and climate impacts, including related social and economic aspects, in support of sustainable development. It excludes methods of pollutants, setting limit values and levels of environmental performance, and standardization of products.

ISO/TC 207 is focused on environmental management systems, auditing, verification/validation and related investigations, environmental labelling, environmental performance evaluation, life cycle assessment, climate change and its mitigation and adaptation, ecodesign, material efficiency, environmental economics and environmental and climate finance. Where appropriate, the ISO/TC 207 works in cooperation with existing committees on subjects that may support environmental management.

A list of standards related to upPE-T project and to concepts as “ecodesign”, “plastic wastes”, “Life Cycle Assessment”, “packaging and environment” and “sustainability of construction works” is shown below in table 7 (published standards) and in table 8 (under development standards).

Table 7: Published standards related to environment management and life cycle assessment for upPE-T project

3.2.4 List of standards related to project management

Closely linked to concepts as “innovation management” and “I+D+I project management”, project management is also a very relevant subject for upPE-T project.

[**CEN/TC 389 Innovation management**](#) is the technical body responsible for the standardization of tools that allow companies and organizations to improve their innovation management, including all kinds of innovation and all the related aspects, as well as the relations with R&D activities.

Internationally, [**ISO/TC 279 Innovation management**](#) is the technical body in charge of the standardization of terminology tools and methods and interactions between relevant parties to enable innovation.

Below there is a list of the standards related to this concept that are applicable to upPE-T project (see table 9 y table 10).

Table 9: Published standards related to project management for upPE-T project

4 Conclusions

Throughout this document, the current standardization context has been widely analysed, following the methodology previously described. Project partners collaboration and their feedback have been very important and useful for this analysis.

This study has been carried out at both, European and international levels and has taken into consideration the different kinds of standardization documents whose scope has been valued as relevant for the upPE-T project.

Many technical committees have been identified. Some of them are responsible for the standardization of areas that may directly impact in upPE-T project for its development, and also for its projected dissemination.

This initial analysis of the standardization landscape is useful at the very early stage of the project because it reveals already existing material and promotes the alignment with current and under development standardization works, facilitating the compatibility of the outcomes with the current market practises.

upPE-T partners are invited to value the impact of the activity developed by the identified standardization committees on their tasks among the project. The fields to be considered and the extent of the searches will be decided together with the project coordinator and partners. Depending on it, and on the contribution that their results can represent in terms of standardization, several actions can be carried out, with different grades of involvement or participation:

- The updating about the standardization activity through the communication by UNE.
- The participation of one or more upPE-T representatives in standardization committees. Standardization is an open activity and all interested parties may participate in a CEN/CENELEC/ISO/IEC technical committee through its National Mirror Committee and National Standardization Body. In this regard, some of the upPE-T partners have already participated in several of the identified standardization committees.
- The dissemination of the upPE-T project advances by delivering reports to the Secretaries of relevant standardization committees (like CWAs, or by attending relevant technical committees' meetings.

Regarding dissemination activities, a list of the most relevant technical committees for upPE-T project is shown below. Despite all the technical committees of this report that have some relation to upPE-T project, probably the most relevant are those related to plastics and packaging. Besides, by the nature of the project itself, environmental issues and project management may also be of interest.

Table 11: Main technical committees for dissemination activities

Subject (Key concepts)	Technical committee
PLASTIC MATERIALS AND PROPERTIES	CEN/TC 249 Plastics
	CEN/TC 249/WG 11 Plastics recycling
	CEN/TC 249/WG 16 Welding of thermoplastics
	CEN/TC 249/WG 9 Bio-based and biodegradable plastics
	ISO/TC 61 Plastics
	ISO/TC 61/SC 6 Ageing, chemical and environmental resistance
	ISO/TC 61/SC 9 Thermoplastic materials
	ISO/TC 61/WG 4 Plastics joining
PACKAGING AND USE OF PLASTICS	CEN/TC 261 Packaging
	ISO/TC 122 Packaging
ENVIRONMENTAL MANAGEMENT AND LIFE CYCLE ASSESSMENT	CEN/TC 261/SC 4 Packaging and Environment
	CEN/TC 411 Bio-based products
	ISO/TC 61/SC 14 Environmental aspects
	ISO/TC 122/SC 4 Packaging and the environment
	ISO/TC 207 Environmental management
PROJECT MANAGEMENT I+D+I project management Innovation management	CEN/TC 389 Innovation management
	ISO/TC 279 Innovation management

In conclusion, there are different alternatives to benefit from and contribute to standardization. The options must be analysed together with the partners to encounter the optimum option according to the results and the approach of the project.

In a later stage, upPE-T project is expected to contribute to new standard developments in specific topics. The inclusion of the outcomes of the project in new or future standards, external to the consortium will enhance the impact of the project and will contribute to the

transmission of the knowledge. In this regard, the development of fast track standards like CEN-CENELEC Workshop Agreements (CWA), or Technical Specifications (TS) will be the most suitable options. Other possibilities would be the contribution to current developments or the proposal of modifications in existing standards.
